

Contents

Preface	ix
Acknowledgments	xiii
Introduction	xv
1 In the Beginning	1-1
The Discovery	1-1
The Jovian System	1-1
Types of Signals	1-1
Localized Sources	1-2
The Io Effect	1-3
Source Boundaries	1-3
Motion on the Io-CML Plane	1-3
Radio Noise Storms	1-6
What Frequencies?	1-6
The Jovicentric Declination of Earth (D_E)	1-6
S-Burst Drift Rates	1-7
Emission Patterns	1-7
Polarization	1-8
Summary of Observations	1-8
Electron Motion in a Uniform Magnetic Field	1-8
Electron Motion in a Planetary Magnetic Field	1-8
A Possible Emission Mechanism	1-9
Summary	1-10
2 Waves	2-1
The Electromagnetic Spectrum	2-1
Windows on the Universe	2-1
The Radio Window	2-4
The Ionosphere	2-4
Discovery of the Ionosphere	2-4
Structure of the Ionosphere	2-4
Ionospheric Effects	2-5
Absorption	2-5
Refraction	2-5
Ionospheric Changes	2-6
Jupiter Observations and the Ionosphere	2-6
Solar Observations and the Ionosphere	2-6
3 When to Listen	3-1
Time	3-1
24-Hour Time	3-1

Greenwich Time	3-1
Setting Your Clock	3-2
Jovian Source Regions	3-2
Radio Noise Storm Predictions	3-3
Why the Sun's Position Is Important	3-4
Conjunction and Opposition	3-5
Jupiter Observing Season	3-5
Observing Season with a Tracking Antenna	3-5
Observing Season with the Jove Antenna	3-6
It's Best Near Opposition	3-6
Visibility Plots	3-6
Declination	3-6
Hour Angle	3-8
Azimuth and Elevation	3-9
Jupiter's Track across the Sky	3-9
Radio Jupiter Pro	3-9
Jupiter Radio Noise Storm Predictions	3-10
Ephemeris	3-10
Yearly Visibility Schedule	3-10
Jupiter Altitude vs Azimuth Display	3-11
Sky Map	3-11
CML-Io Plane	3-12
Long Term Effects	3-13
Jovian Declination	3-13
Maximum Elevation of Jupiter	3-13
Galactic Background Noise	3-13
Opposition	3-14
Jovicentric Declination of the Earth (De)	3-14
Summary	3-14
4 Radio Jove	4-1
School Groups	4-1
Radio Jove Equipment	4-2
The Jove Receiver	4-2
Power Supplies	4-2
The Jove RJ1.1 Antenna	4-3
The Jove RJ1.2 Antenna	4-3
Radio-SkyPipe	4-3
Configurations	4-4
Keeping Track of Time	4-4
Setting a Computer Clock	4-4
Keeping Time on Tape	4-4
Observing Locations	4-5
A Practice Session	4-5
Setting Up the Antenna	4-6

Connecting the Receiver	4-6
Turn It On	4-6
Connecting the Computer	4-6
The Windows Volume Control	4-6
Basic Radio-SkyPipe Settings	4-6
Running Radio-SkyPipe	4-7
Saving SkyPipe Data	4-8
More Practice	4-8
Annotating Your Records	4-8
Noise	4-8
Lightning and Atmospheric Static	4-9
Receiver Circuit Noise	4-9
Galactic Background Noise	4-9
Man-made Radio Interference	4-9
Station Interference	4-10
The Observer's Log	4-10
Using Radio Jupiter Pro	4-10
Observing Jupiter	4-14
Advanced SkyPipe Features	4-15
Projects and Experiments	4-15
Basic Projects	4-15
Intermediate Projects	4-16
Advanced Projects	4-16
Observing the Galactic Background	4-17
The Radio Jove Data Archive	4-17
Radio Spectrograph Images	4-24
Interpreting the Spectrograms	4-24
5 Radio Observations of the Sun	5-1
The Sun	5-1
Solar Cycles	5-1
The Radio Sun	5-2
The Quiet Sun	5-2
The Disturbed Sun	5-3
Receiving Solar Bursts	5-3
Verifying Solar Bursts	5-4
Why Do They Do It?	5-6
A Gallery of Solar Bursts	5-6
6 Antennas	6-1
Antennas	6-1
A Dipole Antenna	6-2
Feeding the Dipole	6-2
Transmission Line	6-3
Decibels	6-4

Loss	6-5
Gains and Losses	6-5
The Half-Power Point (-3 dB)	6-5
Beamwidth	6-6
Absolute Power Levels	6-6
Antenna Gain	6-6
Free-Space Dipole Antenna Pattern	6-6
Dipole above Perfect Ground	6-7
Dipole over Real Ground	6-11
Reflection and Polarization	6-11
Additional Dipoles	6-12
The Original Jove Dipole Array	6-12
The In-Phase Connection	6-12
The Anti-Phase Connection	6-13
Antenna Modeling	6-13
When Jupiter Heads South	6-13
Phasing the Jove Array	6-14
90° Phasing	6-14
RJ1.2 Antenna	6-15
The Moxon	6-17
The Yagi-Uda	6-18
Two-Element Yagi	6-19
Three-Element Yagi	6-19
Antenna Comparison	6-20
Effective Area	6-21
Other Antennas	6-21
7 Receivers	7-1
Transmitting and Receiving	7-1
The Superheterodyne	7-3
Direct Conversion Receiver	7-4
Receivers for Jupiter	7-4
What to Look For in a Receiver	7-6
Do You Need a Preamplifier?	7-7
Noise Cancellation	7-8
Noise Nulling	7-8
Noise Blanker	7-8
Noise Limiter	7-8
Digital Signal Processing (DSP)	7-8
8 Recording Data	8-1
Audio Recording	8-1
Tape Recorder	8-1
Video Recorder	8-1
Digital Voice Recorder	8-1

Computer (WAV or MP3 file).....	8-2
Signal Strength Recording	8-2
Strip-Chart Recording	8-2
Developing a Signal Strength Voltage	8-2
Time Constant.....	8-3
Analog to Digital Recorders.....	8-4
Sound Card	8-5
9 Advanced Measurements	9-1
Polarization	9-1
Circularly Polarized Antennas	9-2
Interferometers	9-4
Angular Resolution.....	9-4
Lots of Lobes	9-4
Fringe Visibility	9-5
Missing Bursts	9-6
Spectrographs	9-6
Swept Frequency Receiver.....	9-7
Multichannel Analyzer	9-8
Resolution	9-9
High-Resolution Tape-Slowdown Spectrograph	9-9
Acousto-Optical Radio Spectrograph.....	9-12
The Radio Jove Spectrographs	9-12
Jove Spectrograph Software	9-14
Fast Fourier Transform Spectrograph.....	9-16
Spectrograph Antennas	9-16
UFRO 26.3 MHz Array	9-16
WCCRO Log-Periodic	9-17
Riihimaa’s Circularly Polarized Log-Periodic	9-17
Log-Spiral “TP” Arrays	9-17
10 Calibration	10-1
Noise.....	10-1
Noise Voltage	10-1
Root Mean Square (RMS) Value	10-1
Noise Power and Temperature	10-2
Receiver Noise	10-3
Receiver Noise Temperature.....	10-4
Noise Measurements.....	10-4
Noise Sources	10-4
Using the Calibrator	10-6
Set the Dynamic Range	10-6
Stairstep Calibration	10-7
Power Calculations	10-7

Epilogue E1
